**Case Study** 

Exceed<sup>™</sup> Tough+ Exceed<sup>™</sup> Flow+ Exxtra<sup>™</sup> Seal

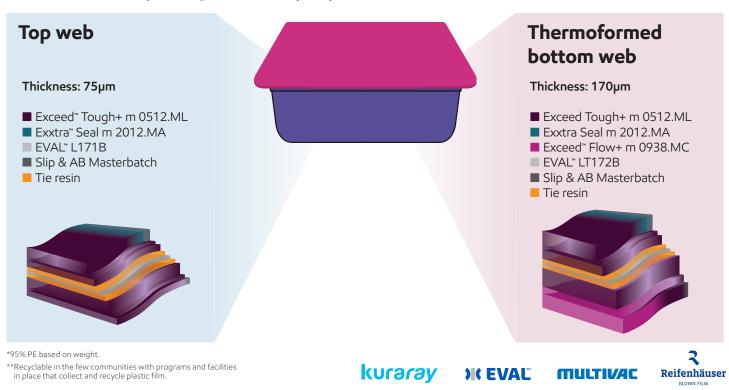

# Full<sup>\*</sup> PE thermoformed packaging that can offer recyclability<sup>\*\*</sup> and uncompromising package functionality and optics

Data and results presented herein apply specifically to the noted application under this fact sheet. Your results may differ depending on factors such as operating conditions, equipment and materials used.

## Challenge

To produce a recyclable, thermoformed package with 95 wt% PE content without compromising on functionality or optics.

### Solution

Creation of a 95 wt% PE thermoformed package, consisting of a formed PE/EVOH bottom web and PE/EVOH lid film-with both high oxygen barrier and outstanding package integrity through optimized corner thickness and puncture.

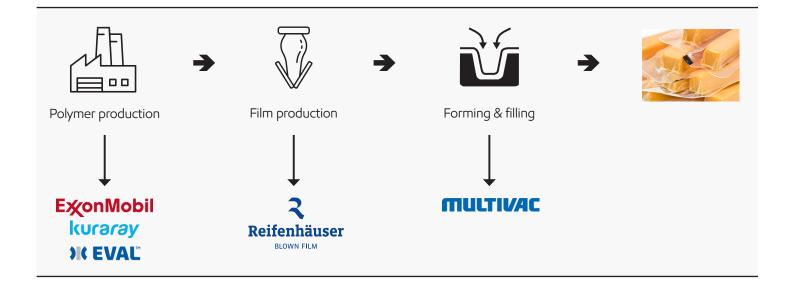

The bottom web was produced with ExxonMobil best-inclass resins like Exceed<sup>®</sup> Tough+, Exceed<sup>®</sup> Flow+ and Exxtra<sup>®</sup> Seal performance PE and a special EVAL<sup>®</sup> EVOH resin for thermoforming. The films were made on a Reifenhäuser Aqua Cool 9-layer barrier line.

ExxonMobil resins, Exceed Tough+ m 0512.ML and Exceed Flow+ m 0938.MC provide exceptional puncture performance and formability, while the EVAL<sup>®</sup> EVOH resin LT172B designed for thermoforming, combines low thickness with high barrier properties. The top film consists of a PE/EVOH coex film produced on a Reifenhäuser Aqua Cool 9-layer barrier line with Exceed Tough+ m 0512.ML, Exxtra Seal m 2012.MA and EVAL<sup>®</sup> EVOH high barrier resin L171B.

The combination of Reifenhäuser's Aqua Cool technology and ExxonMobil's high performance resins can result in excellent optics, exceptional puncture performance and formability.

The package was then formed and filled on a MULTIVAC R126 machine according to industry standard process conditions.

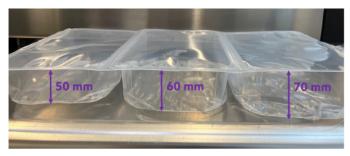

The package was also successfully produced on a MULTIVAC R245 machine at high line speed.

### Result

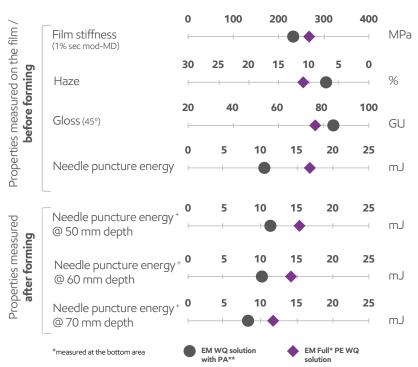

The combination of Exceed Tough+, Exceed Flow+ & Exxtra Seal performance PE and EVAL<sup>™</sup> EVOH resins can deliver outstanding package integrity, with comparable film stiffness and exceptional puncture performance compared to PA containing thermoformed film. Package functionality such as oxygen barrier and optics are comparable to PA containing thermoformed films.

The film has excellent machinability on the MULTIVAC R245 forming and filling machine at standard and high line speed. Under optimized thermoforming trial conditions (\*) on the R245 MULTIVAC line, maximum line speed (>12 cycles/minute) was achieved.

(\*) Sealing: 1 second at 120°C with 3 bar, forming: 2.3 seconds at 100°C, mold size: 182mm x 112mm, with depths of 50mm, 60mm and 70mm.

#### **Key properties**

Units

Full\* PE solution with Exceed" Tough+ m 0512. ML, Exxtra" Seal m 2012.MA & Exceed" Flow+ m 0938.MC vs. PA containing WQ solution, both 170  $\mu m$  films can offer:

- Comparable film stiffness and optics
- Step increase in puncture performance before and after forming

#### \* 95% PE based on weight.

\*\*PE/PE/PE/Tie/PA/EVOH/PA/Tie/PE with thickness distribution: 46/10/10/7/10/10/46/6/25.

Both 170  $\mu m$  films have OTR below 0.5 cc/(m².day) and WVTR below 3 g/(m².day).

WQ: Aqua Cool water-quench EM: ExxonMobil PA: polyamide

Data from tests performed by or on behalf of ExxonMobil on representative samples.

The combination of Exceed Tough+, Exceed Flow+ & Exxtra Seal performance polymers and EVAL<sup>®</sup> EVOH with Reifenhäuser's Aqua Cool technology, allows you to create a 95 wt% PE-based thermoformed package, without compromising on package integrity, optics or machinability.

### What's new: ExxonMobil Signature Polymers

All our polymers are now positioned under a single portfolio brand: Signature Polymers. The aim is to simplify our product architecture and naming to improve portfolio navigation for you. We would like to stress that our commitment to high quality products remains the same, it is the names that change. Everything else remains the same. We will be making these modifications over the next six months so you will see both old and new grade names highlighted during that time.

Here's a quick overview of brands and grade names that have changed in this document:

#### Legacy commercial name

Exceed<sup>™</sup> XP 7052ML Exceed<sup>™</sup> 2012MA Enable<sup>™</sup> 4009MC

### New commercial name Exceed<sup>®</sup> Tough+ m 0512.ML Exxtra<sup>®</sup> Seal m 2012.MA Exceed<sup>®</sup> Flow+ m 0938.MC

Some of our existing Exceed, Achieve, Paxon and premium PP/HD grades have moved to Exceed brand; most existing Enable grades have moved to Exceed Flow[+]; most of our existing Exceed XP grades have moved to Exceed Tough[+]; most of our existing Exceed S grades have moved to Exceed Stiff[+]. More details here https://www.exxonmobilchemical.com/en/brands/signature-polymers/exceed\_high\_performance\_polymers or contact your ExxonMobil representative to know more.
