Issue 20 | December 2022

Here's the latest issue of Energizing Innovators, a newsletter providing expert insights into the synthetic lubricants industry. In this issue, we'll share with you how we can help provide solutions that improve performance under extreme conditions and extend equipment life.

A Study of the Influence of Synthetic Base Fluids on High Performance Greases

As demand on equipment productivity and reliability continue to increase, it becomes more important to understand the impact of base fluid in improving the performance of lubricating greases under severe conditions, including higher loads and broader operating temperatures.

Featured in NLGI Spokesman, authors, Luca Salvi, Product Development – Formulation Principal, ExxonMobil Technology and Engineering Company and Joseph Kaperick, Technical Advisor – Grease Technology, Afton Chemical Corp take a closer look at the performance of several different lithium complex greases produced with high viscosity metallocene polyalphaolefin (mPAO) base oils.

ExxonMobil Grease Solution: Breaking barriers to growth in the high-performance grease space

Najeeb Kuzhiyil, Ph.D., Synthetics Customer and Application Development Advisor

Learn how the combination of Metallocene high-viscosity PAO and Alkylated Naphthalene enables manufacturers to develop high quality greases that perform across a broader temperature range.
