Achieve™ Advanced PP
Challenge reality

Extraordinarily tough automotive parts

Energy lives here™

Challenge reality and rethink what’s possible in automotive performance.

With higher impact than standard impact copolymers (ICP), Achieve™ Advanced polypropylene (PP) enables tougher, lighter vehicle components that are durable and safe.

Create new vehicle designs
Through collaboration, Achieve Advanced PP enables customers to create new vehicle designs with improved performance – that do more with less.

It increases the opportunity to use PP in vehicle designs, ultimately leading to lighter weight parts that can improve efficiency in conventional cars and ‘new energy vehicles’ (NEVs).

Achieve Advanced PP can be used neat or in compounds for vehicle components such as:

- Interior parts - instrument panels, door panel trim, and pillar trim
- Exterior body parts - bumper fascia and wheel well liners

Achieve Advanced PP provides a step-out toughness and stiffness balance with exceptional cold temperature properties. It offers 35% higher impact and 20% improved toughness (low temperature ductility) than standard ICP.

Plastomer loading can be reduced by 50%, to simplify formulations and provide significant cost saving opportunities.

With multi-region supply of consistent quality materials that can meet specifications globally, Achieve Advanced PP can help optimize qualification time and cost.

• Step-out toughness/stiffness balance
• Opportunity to lightweight
• 35% higher impact
• Up to 50% less plastomer use
Figure 1:
Selected property data for Achieve™ Advanced PP8285E1 and the reference.

Figure 2:
Selected property data for compounds with Achieve Advanced PP8285E1 and the standard ICP reference. Plastomer loading reduced from 20% in the reference TPO compound to 10% in the Achieve Advanced PP8285E1 compound.
